Introduction

sunExt Winter Garden is a transparent glass roof system that brings light to your spaces and gives them spaciousness, allowing you to enjoy a panoramic view of your surroundings without any obstacles.

The modern design in combination with the variety of colors we offer and the possibility of different automatic systems (LED, rain, wind, snow sensors, etc.) make it ideal for use in outdoor and semi-outdoor spaces: houses, hotel facilities, restaurants and cafes.

Water evacuation system

The Pergola is designed with fixed tempered glass panels, discreetly inclined to evacuate rainwater. The smooth drainage is carried out through the two front columns.

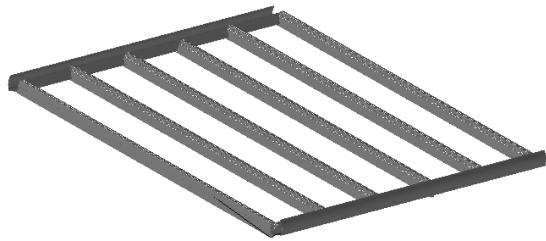

Special attention has been paid to the finishes, no screws are visible in the frame and the intermediate beams are extremely narrow and elegant.

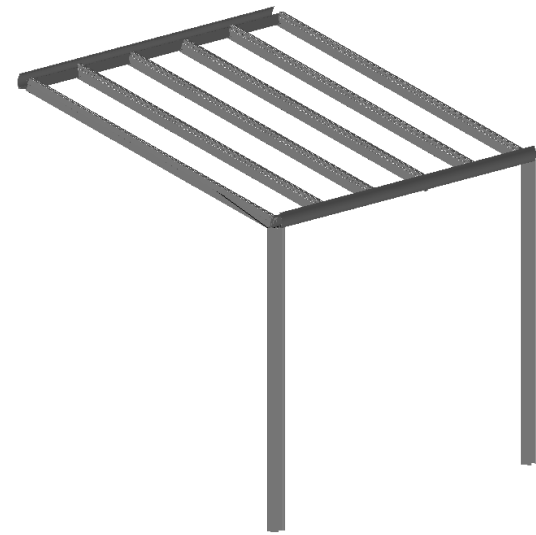

Our sunExt pergolas can be customized, incorporating guillotines, sliding or zip systems
